

Hervey Bay Hockey Association, Main Field

SUMMARY OF RESULTS*

Annual Savings
\$11,484.12

Payback Period
2.4 years

Power Savings per year
\$1884.10

CO₂ Savings per year
7.5 tonnes

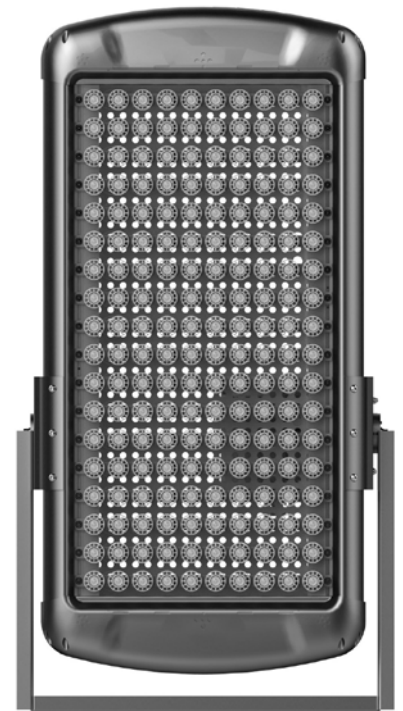

*compared to traditional lighting solutions

Empyrean Lighting™ designed and supplied 16 x Andromeda™ High Mast lights to the Hervey Bay Hockey Association to allow for training lux levels using only LED technology. The retrofit of our luminaires for training has provided the club with a massive electricity saving including maintenance moving forward. For competitive games the club adds a couple of traditional lights to the LED solution to reach the required lux result.

“The Hervey Bay Hockey Association cannot speak highly enough, reference both the company Empyrean, the lighting product/s the support and guidance that we received prior during and post installation. The lights have made a significant impact on the standard of the lux that we now enjoy for all our competition’s. The technical support from the Empyrean electrical engineers allowed for the LED units to be installed in conjunction with the existing halogen field lighting. This has allowed the association to structure further transiting to LED lighting units when funding allows.”

I would recommend Empyrean to any organisation seeking to upgrade to LED Lighting.”

- Cathy Milijasevic, HBHA Secretary

Features of our Andromeda™ High Mast Luminaires -

- Reduced maintenance costs
- IP66 – suitable for outdoor use
- Extremely durable and resist violent vibration
- Lifespan of 60,000 hrs to L70
- Start up and shut down immediately
